A.1 Industry Classification

Cambodia, Iran, and Nepal use the International Standard Industry Classification of All Economic Activities (ISIC) Rev.3. Other Asian economies already have switched to the ISIC Rev.4. The concordances between the industry classification used in the Databook and the ISIC Rev.3 and Rev.4 are shown in Table 7 and Table 8, respectively.

Table 7: Industry Classification – Concordance with ISIC Rev.3

Note: "n.e.c." represents "not elsewhere classified."

A.2 Data Publication and Visualization

The productivity data used in this Databook is based on the APO Productivity Database 2019, which provides the annual productivity accounts covering Asian countries for the period 1970–2017. The data set is available at the APO website (www.apo-tokyo.org). Timely analysis of the current economic situation is beyond the scope of the Databook. In the meantime, for an insight into the current economic growth, one must rely on quarterly national accounts (QNA) from each country. Although they are timelier, the QNA are often less precise and subject to frequent revisions as more reliable data become available in their normal estimation cycle. With this trade-off between timeliness and data quality in mind, the APO recognizes the complementary benefits of collating and presenting a country's QNA alongside its database of annual data. As a result, this project developed the Asian Economy and Productivity Map (AEPM) by expanding its scope on data visualization in September 2016. Shown in Appendix Figure 41, the AEPM provides an instinctive understanding of recent economic growth, as well as the long-term productivity performances described in the Databook. This is also available at the APO website.
